

Supplementary Figure 4. Growth curves for *C. jejuni* 11168H, 81-176, 81116 and M1 wild-type strain and the respective *rrpA* and *rrpB* mutant. Bacteria were grown under either microaerobic (A) or aerobic conditions (B) at 37°C (with shaking at 75 rpm) in Brucella broth with bacterial growth assessed by recording the OD₆₀₀ of the culture at different time points. Asterisks denote a statistically significant difference (* = $p < 0.05$).
